

I am writing to urge you to disregard NAB petition 04-160. Satellite radio is strictly a subscription service that in no way interferes with commercial broadcasting sources provision of services. This petition is an attempt to stifle competition and any action by the FCC to uphold this petition is both unnecessary and poor government.

If satellite radio is successful it is because it is innovative, appealing, and offers more choice. Regular stations and their national association are should be learning, not entrenching, from this. The NAB is attempting to have the government do what the free market economy won't.....hinder competition. Please do not bow to the pressure from this lobby and let the market decide what the public wants.
